

Coastal Application TerraStop 600CA

terraStop 600CA is a non woven needle punched staple fibre geotextile. This type of geotextile provides the best protection against the harsh marine environment .

Besides its excellent filtration and hydraulic properties it provides excellent resistance to::

1. Puncture
2. Abrasion
3. UV.

Used in diverse applications including:

1. Sea Walls
2. Groynes
3. River Bank protection
4. Temporary Bunds
5. Levees

Can be stitched in large panels using polyester thread to assist installation in submerged applications.

Stitching takes place in a controlled environment guaranteeing consistent strength and quality.

Layers of geotextile are stitched in a concertina format and rolled. When the rolls arrive on site they are ready for installation.

This method saves cost in installation time and labour and reduces material wastage as there is no requirement for large overlaps
